

YOUR GUIDING STAR FOR THE DIGITAL OPTIMIZATION OF YOUR FARM

Data-based decisions. Predictable success.

The digital platform for optimal workflows on your farm – all data at a single click.

BFN Fusion turns the additional opportunities and added value of digitalization into a benefit for everyone, including family farms. Animal welfare improvements, documentation obligations, more efficient production: these and more aspects become much easier to implement.

The Big Dutchman guarantee: All data is accessible to you alone – **BFN Fusion** facilitates the documentation of all production processes, indicates potential for optimization and increases the sustainability and profitability of your business.

No connection issues.

The **OrbitX IoT gateway** connects your farm and **BFN Fusion** in a simple, secure and reliable manner. The small box is easy to install, even without internet connection.

OrbitX sends all production and climate data to the **BFN Fusion** cloud in real time. Integrating the IoT gateway into the existing farm network, you can interconnect the data of all your locations. **BFN Fusion** validates and structures your data in real time so you receive a full, detailed and comparable overview of your production.

BFN Fusion? So many benefits for you!

- full control ■ maximum security ■ access via PC and smartphone app ■ lower costs ■ increase efficiency
- prevent human error ■ reduce staff workload ■ lessen production risks ■ document with legal certainty
- remain flexible and capable of acting

Everything
under control with
the BFN Fusion app –
anywhere,
anytime!

Big added value – also for smaller farms: livestock production with BFN Fusion

The demands on agriculture and its products have increased dramatically – and they continue to grow. Farmers must overcome complex challenges if they want to run a sustainable, socially accepted and profitable business in the future.

- **Efficient processes** and the healthy development of the livestock are essential for profitable production.
- **Animal welfare** and food safety are valued as important purchase criteria by more and more consumers.
- **Flexibility and the ability to act are significant factors** if agricultural enterprises want to be successful.
- **Consistent documentation** of production and product specifications is a must for producers.
- **Traceability** is a prerequisite in food production.

- **Regulations requiring documentation of a farm's environmental impact** will become stricter in the future.

- **Finding qualified staff for livestock production** is getting more difficult and more expensive.

These challenges mean that farmers have to collect and store ever-increasing amounts of specific data that must be available at all times. **BFN Fusion** simplifies the efficient collection of data and also generates added value for your business. Complex management tasks become much easier.

**You want your business to grow?
The functional range of
BFN Fusion will grow with you!**

Your future starts with a dialog.

Let's get talking!

We are convinced that we have created an integrated software solution that will help you prepare your company for the future by making data-based decisions. Do you have questions, specific requirements or doubts? We would love to talk.
